

# Geolocation Dispatch Mgr: WebChat

You can Geolocate Users on a Map if you are assigned as Web Dispatcher for specific users/groups by your company administrator. Users must have Location Services "ON" in phone settings and "Allow Company to Track me" in App Options

1. Locate Individuals via clicking on Dispatch icon, from here you can Call, Message, PTT, Video Call/Stream, Run daily activity reports, view Itineraries, Bread Crumbs and view location/Device data.

Note: To view itinerary, user must have "Tracking", not 'On Demand Tracking' Setting in Web Admin.

2. Locate Groups, from here you can Group call, message, PTT, or run daily activity reports, itineraries, bread crumbs, view traffic layer and more.
